Faculty of Foreign Philology, National University of Uzbekistan

ABSTRACT: One of the current issues is, of course, to educate the next generation. One of the things that is being done in this regard is, of course, the teaching of foreign languages on the basis of modern pedagogical technologies. This article discusses the role of modern technology in foreign language teaching. Special attention will be paid to the work being done in Uzbekistan in this regard. In the end, based on the analysis, suggestions and conclusions are formed.

KEYWORDS: Innovative technologies, foreign language, pedagogical technologies, qualified personnel

It is known that the study and teaching of foreign languages, along with all developed countries, has become modern in our country - Uzbekistan. It is no exaggeration to say that the conditions created for young people to learn foreign languages, as well as for all our compatriots, are proving their positive results.

Significant changes and innovations are taking place not only in foreign languages, but also in all spheres of science. Of course, at the heart of such a huge creative work lies the zeal of the head of our state, attention to the youth, a sense of confidence in the future. Today The Law of the Republic of Uzbekistan "On Education" adopted by the IX session of the Oliy Majlis of the Republic of Uzbekistan (August 29, 1997) and the ideas of which are being widely implemented, and "National Program of Training Personnel" and The Resolution of the President of the Republic of Uzbekistan dated December 10, 2012 No 1875 "On measures to further improve the system of learning foreign languages" fully reveals the essence of the process of educating a well-rounded person and a qualified specialist. Pedagogical technology is a teaching tool of the teacher (pedagogue), which, based on the needs of society, effectively forms the social qualities of a predetermined person and sees the system of goal-oriented learning as a system and its components. is a technology-based educational activity that monitors the impact of a particular sequence on students in a particular setting and evaluates learning outcomes. Each stage of the process of training qualified personnel must carry out certain tasks to effectively organize the educational process, to raise it to a higher as well as to bring it to the level of world education. Enjoying the modern achievements of world science is the need of the hour. This requires only a perfect knowledge of foreign languages, mastering all the rules of the language. To this end, the search for more effective ways to learn foreign languages, the creation of different teaching methods is an urgent task for our scientists, aspiring teachers and educated youth. It is important to introduce international educational standards for foreign language teaching into the system of continuing education in Uzbekistan and to build on the pan-European competencies of foreign languages: learning, teaching and assessment. In accordance with the Resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated May 8, 2013 "On approval of the new state educational standard for foreign languages in the system of continuing education" adopted to ensure the implementation of the above decision a number of guidelines for the application of modern pedagogical technologies in the educational process. Today, the government is creating all the conditions for teaching foreign languages. The fact that all levels of the education system are specially equipped for teaching foreign languages is a clear proof of our opinion.

One of the most visible features of our education system today is the installation of separate computers and audio devices for each student, the rooms are equipped with video projectors. In addition, the addition of up to 30% bonuses to the salaries of teachers of foreign languages will ensure that teachers work harder and, ultimately, develop new qualified personnel. In addition, today we have modern forms of foreign language teaching in the private sector. The private sector today offers the following types of modern foreign language learning:

- Language learners are divided into small subgroups by level;
- Focus on speaking a foreign language fluently and using a foreign language in communication;

- Individual engagement with each language learner;
- Individual work remotely online, taking into account the current pandemic conditions;

Today, the process of private education in Uzbekistan is developing rapidly, as most government agencies do not provide these opportunities. The development of modern education in the public or private sector is undoubtedly important for social development.

In conclusion, the study of foreign languages on the basis of modern innovative technologies can make an effective turn in the educational process. Given that other areas are somewhat limited on the mainland, we think it is appropriate to focus on education and thus raise the level of development to a higher level. In addition, people who are fluent in foreign languages can exchange experiences in leading foreign countries and contribute to development more than others.
