ABSTRACT: This article predicts the post-pandemic world situation and discusses ways to mitigate the negative impact of the coronavirus on the economy, protect the health of the population and further strengthen social protection. Changes in the credit, tax and education systems, as well as the problems caused by this pandemic, have been studied. The virus affects not only human health, the global and national economy, but also the fate and future of the individual. All aspects of life, all of humanity are facing severe trials. The consequences of economic and financial losses will be eliminated in time, production and services will be revived, and new jobs will be created.

KEYWORDS: pandemic, Covid-19, social protection, economy, economic activity, quarantine, enterprises, information, communication, preliminary restrictions, coronavirus.

Today, the situation with the coronavirus pandemic in the world is becoming more complicated. States are being forced to expand pandemic response and impose strict restrictions. Appropriate measures and necessary practical work are being carried out in our country to protect the health of the population, to protect the economy as much as possible from the damage caused by restrictions, to protect the population in need of social protection. Of course, the fight against the pandemic by our government, the support of the population and businesses are bearing fruit, and the work in this area continues unabated. In this regard, the following was noted at the video conference held on May 13, 2020 under the leadership of President Shavkat Mirziyoyev. "... We must all clearly understand one fact: how effectively the new system we have introduced in a pandemic will depend on us alone. 3 trillion soums were allocated from the Anti-Crisis Fund for these purposes. In addition, new investment projects worth more than 1 trillion soums have been launched to ensure economic activity.

In addition, a total of 18 trillion soums of 87,000 business entities and more than 5 trillion soums of bank loans to about 2 million citizens have been extended. Last month alone, 250,000 entrepreneurs and enterprises, 83,000 farmers Deferred payment of taxes and other payments totaling 400 billion soums. More than 11,000 entrepreneurs using state property have been exempted from paying rent. As a precautionary measure, out of 14,000 industrial enterprises that did not operate during the quarantine period, 10,000 have now resumed operations. 178,000 of them have returned to work. " These data testify to the fact that the country is developing and implementing drastic, serious and effective measures to mitigate the negative impact of the coronavirus on the economy, public health and social protection, and will allow us to get our lives back on track. serves. Today, every person and leader, young and old, must know this and follow the established order.

It should be noted that the situation with the threat of "coronavirus" obliges us to analyze many areas, to draw conclusions based on life lessons.

In the Year of Science, Enlightenment and the Digital Economy, it is important to develop a comprehensive poverty reduction program outlined in the State Program, in line with the goals of the UN Sustainable Development Program, and its effective implementation.

One of the important conclusions we drew during the quarantine days was the need to radically reconsider the social protection system in Uzbekistan. There are also issues related to the realization of the constitutional rights of citizens, which have been neglected for years.

In particular, the People's Democratic Party is initiating the adoption of a law on the "subsistence minimum" to set the "minimum subsistence level" established by the Constitution. This law will be of great importance in protecting the interests of our compatriots, who, despite their work, are struggling to make ends meet, receiving pensions and benefits, defining the boundaries of need and poverty, adapting our approach to

international standards. Therefore, our faction has begun to develop the concept of the bill. The establishment of a subsistence minimum is a matter of principle for our party.

It is also required that party organizations and groups at all levels take an active part in the process of developing the concept of social protection, reflecting solutions to pressing issues, provided for in the State Program for this year.

Ulugbek Inoyatov, Chairman of the Central Council of the People's Democratic Party, said: "It is important to strengthen parliamentary and parliamentary control over the living conditions of people living in the houses of" Mercy ", " Generosity "and" Mercy ", the provision of medical and social facilities."

Given the increased risk of coronavirus and the growing need for quality health care, it is necessary to conduct an in-depth analysis of health care reforms and develop and implement additional ways and directions to reform it at the level of modern requirements.

Of course, effective measures are being taken to prevent the spread of the virus, and all necessary medical care is being provided to sick and quarantined citizens. Necessary funds are also allocated from the Anti-Crisis Fund, about 5.5 thousand medical workers are involved in the fight against coronavirus, who are provided with material and moral support.

However, it is no secret that there are systemic problems in this area. Once the threat of the coronavirus is eliminated, our party believes that it is necessary to carry out profound reforms in the health care subsystem. First of all, there is a shortage of medical staff in the regions, a shortage of medical staff (30-40% of vacancies in some areas), the effective implementation of primary health care in rural areas, strengthening social protection of doctors, raising the status of this profession. Careful decision-making is needed.

Preliminary restrictions on the prevention of the spread of coronavirus have shown that in educational institutions, too, it has become an urgent task to work in accordance with modern requirements. It should be noted that the Ministry of Public Education has done a great job in organizing video and online lessons through TV channels, social networks, so that the educational process does not stop despite the difficulties of the quarantine days. Millions of students and their parents are happy with this work.

At the same time, it is clear that the effective use of information and communication technologies in the education system in the test days, the introduction of advanced skills in distance learning, special attention to these aspects in determining the professional qualifications of teachers is a very important issue.

Given the globalization of information and the high availability of information, it is necessary to further improve the skills of teachers to work with information. Can a teacher who is not aware of the latest developments in science and technology meet the interests and needs of students? Of course not. It is also important for educators to make a professional commitment to the effective use of information technology and the in-depth study of the secrets of distance education. Because today's students acquire knowledge faster through information technology, in particular, computers, smartphones and other gadgets. Deep acquisition of pedagogical skills in this area has become an urgent task for children to enter the psyche.

We talk a lot about innovative education. Do our teachers have such skills? Only a teacher who has applied innovations in his subject in the learning process, used them effectively, and is able to create innovations, will have innovative skills. Of course, one month in three years is not enough for this. Innovative skills require independent study and constant work on themselves. During the quarantine period, we felt that deep reforms in these areas in the education system are vital and necessary.

During the global coronavirus pandemic, the importance of historical, social and spiritual values in human and social life became clear. Although quarantine restrictions have forced people to distance themselves from each other, there are good reasons to say that they have brought our people closer spiritually. In the days of trial, we realize that progress has made us more materialistic, and that most people are spiritually isolated. It should be noted that quarantine has given an opportunity to think about it more broadly, to strengthen ties between family members, to show mutual love.

The virus affects not only human health, the global and national economy, but also the fate and future of the individual. All aspects of life, all of humanity are facing severe trials. The consequences of economic and financial losses will be eliminated in time, production and services will be revived, and new jobs will be

created. We will all learn from these lost trials, correct our mistakes, and become stronger spiritually than before.

It is clear that after the coronavirus pandemic, the world and social relations will change. This world will not be a pre-disaster world. We need to be patient in difficult days, learn the most important lessons, be closer to our loved ones. If we maintain the strength and solidarity of the heart, we can make up for any other losses. After quarantine, it is both a duty and an obligation for us to return to the place of work that we all miss and work more productively for the development of our country and the future of our youth. This is because it will not be easy to eliminate the consequences of the pandemic in the shortest possible time and make up for the losses.
